REGULAR PATTERNS

- The larger sigma is, the better Bancor Market performs, while the worse Classical Market performs. (In contrast, …)
- The larger customer number is, the better Classical Market performs, while the worse Bancor Market performs.
- Smaller bouncing interval worsens performances of both the Bancor Market and Classical Market. But if the customer number is small, the Classical Market will totally break down while the Bancor Market can still work.
- The smaller bouncing range finely improves Bancor Market's performance while finely decrease Classical Market's performance.
